Retest JS coding Test Questions

1. Create a Inverted triangle Number Pattern

Input:

5

Expected Output:

1 2 3 4 5

1 2 3 4
1 2 3

1 2

1

2. Write a JavaScript program to remove duplicate elements from the given array without using Set.

Input: [10, 20, 10, 30,
20, 40, 30, 50]

Expected Output: [10, 20,
30, 40, 50]

3. Question: Find duplicate characters in a string.

Input:

"programming"

Expected Output:

m

r

g

4. Using filter(), map(), and reduce(), calculate the total price of all Electronics products.

Input:

```
const products = [
   { name: "Laptop", category: "Electronics", price: 50000 },
   { name: "Chair", category: "Furniture", price: 5000 },
   { name: "Mouse", category: "Electronics", price: 1000 },
   { name: "Monitor", category: "Electronics", price: 15000 }
];
```

Expected Outputt:

66000

5. Write a JavaScript program to
count the number of letters, numbers, special characters, and spaces in
a given string.

Inputlet str = "Hello 123@ World!";

Expected Output

Letters: 10

Numbers: 3

Special Characters: 5
Spaces: 2

Write a JavaScript program to
separate the even and odd numbers from an array into two different arrays.Input:

let arr = [10, 15, 22, 33, 40,
51, 64, 75]; without using filter
method

Expected Output:

Even Numbers: [10, 22, 40, 64]
Odd Numbers: [15, 33, 51, 75]

7. Write a JavaScript program to
find how many times each city appears in the given array of objects.

Input:

```
let people = [
   { name: "John", city:
"Kochi" },
   { name: "Sara", city:
"Trivandrum" },
   { name: "Alan", city:
"Kochi" },
   { name: "David", city:
"Calicut" },
   { name: "Lisa", city:
"Kochi" },
   { name: "Tom", city:
"Trivandrum" }
];
```

Expected Output:

Kochi: 3,

Trivandrum: 2,

Calicut: 1

8. Write a JavaScript program to reverse the order of words in a given sentence.

Input `let str = "I am a developer";`

Expected Output: developer a am I
